

## LA County Choprops Honey Pot oil filter

THE Hildebrandt oil filters used during the '50s and '60s by truckers and hot rod builders were the inspiration for the new Honey Pot oil filter from LA County Choprops.

Each filter is cast in aluminum, heat-treated and machined before being finished either natural, polished or black wrinkle with polished highlights. The Honey Pots are supplied with stainless steel lid mounting hardware and a spin-on H-D style oil filter is machined to accept 1/2in NPT fittings.

They filters are compatible with anything up to a Twin Cam and a wide variety of mounting and oil line adapters are being designed to accommodate most applications.
